

AMENDMENTS TO THE CLAIMS

Please amend this application as described in the Listing of Claims, which will replace all prior versions and listings of claims in the above-referenced application.

LISTING OF CLAIMS

- 1-2. (Cancelled).
3. (Withdrawn) A method for intranasal administration of calcitonin which comprises administering intranasally to an individual a solution of calcitonin consisting essentially of calcitonin, chlorobutanol at a concentration of 0.25% weight/weight, and water and having a pH of about 3.5, sodium chloride at a concentration of about 0.85%, and optionally hydrochloric acid in an amount sufficient to adjust the pH of the solution to about 3.5, and wherein the aqueous solution has an oxygen at a content of less than about 5%.
4. (Withdrawn) The method of claim 3 wherein the calcitonin is present in solution at a concentration of about 0.0355 weight/weight.
5. (Withdrawn) The method of claim 3 wherein the calcitonin formulation is administered into a nose of an individual through an actuator tip as a spray, wherein the spray has a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip.
6. (Withdrawn) The method of claim 5 wherein the spray produces droplets, wherein less than 5% of the droplets are less than 10 microns in size.
7. (Withdrawn) The method of claim 5 wherein the spray has a spray pattern major axis of about 31.2 mm and a minor axis of about 27.4 mm.
8. (Previously Presented) A composition comprising:
an aqueous solution of calcitonin at a concentration of about 0.0355% weight/weight;
chlorobutanol at a concentration of about 0.25% weight/weight;
sodium chloride at a concentration of about 0.85% weight/weight; and

hydrochloric acid in an amount sufficient to adjust the pH of the solution to about 3.5;
wherein the composition is suitable for intranasal administration in humans.

9-11. (Cancelled)

12. (Previously Presented) A composition comprising:
an aqueous solution of calcitonin salmon at a concentration of 2200 International Units (I.U.) per
ml;
chlorobutanol at a concentration of 0.25% weight/weight;
sodium chloride at a concentration of 0.85% weight/weight; and
hydrochloric acid in an amount sufficient to adjust the pH of the solution to 3.5;
wherein the composition is suitable for intranasal administration in humans.

13-15. (Cancelled)

16. (Previously Presented) A pharmaceutical composition comprising:
an aqueous solution of calcitonin salmon at a concentration of 2200 International Units (I.U.) per
ml;
chlorobutanol at a concentration of 0.25% weight/weight;
sodium chloride at a concentration of 0.85% weight/weight; and
hydrochloric acid in an amount sufficient to adjust the pH of the solution to 3.5;
wherein the composition is suitable for intranasal administration in humans.

17-19. (Cancelled)

20. (New) A pharmaceutical device comprising a composition according to claim 8 and an
actuator to produce an aerosol spray of the composition, the spray having a spray pattern
ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the
actuator tip.

21. (New) A pharmaceutical device comprising a composition according to claim 8 and an
actuator to produce an aerosol spray of the composition, wherein the spray has a spray pattern
major axis of about 31.2 mm and a minor axis of about 27.4 mm.

22. (New) A pharmaceutical device comprising a composition according to claim 8 and an actuator to produce an aerosol spray of the composition, the spray having a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip, wherein less than 5% of the droplets are smaller than 10 microns in size.
23. (New) A pharmaceutical device comprising a composition according to claim 12 and an actuator to produce an aerosol spray of the composition, the spray having a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip.
24. (New) A pharmaceutical device comprising a composition according to claim 12 and an actuator to produce an aerosol spray of the composition, wherein the spray has a spray pattern major axis of about 31.2 mm and a minor axis of about 27.4 mm.
25. (New) A pharmaceutical device comprising a composition according to claim 12 and an actuator to produce an aerosol spray of the composition, the spray having a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip, wherein less than 5% of the droplets are smaller than 10 microns in size.
26. (New) A pharmaceutical device comprising a composition according to claim 16 and an actuator to produce an aerosol spray of the composition, the spray having a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip.
27. (New) A pharmaceutical device comprising a composition according to claim 16 and an actuator to produce an aerosol spray of the composition, wherein the spray has a spray pattern major axis of about 31.2 mm and a minor axis of about 27.4 mm.
28. (New) A pharmaceutical device comprising a composition according to claim 16 and an actuator to produce an aerosol spray of the composition, the spray having a spray pattern ellipticity ratio of from about 1.0 to about 1.4 when measured at a height of 3.0 cm from the actuator tip, wherein less than 5% of the droplets are smaller than 10 microns in size.
